

8. Smart Task Planner

Objective:

Break user goals into actionable tasks with timelines using AI reasoning.

Scope of Work:

- Input: Goal text (e.g., “Launch a product in 2 weeks”)
- Output: Task breakdown, dependencies, estimated timelines
- Optional frontend to submit goal & view plan

Technical Expectations:

- Backend API to process input & generate plan
- Optional database for task storage
- LLM for reasoning & task generation

LLM Usage Guidance:

- Prompt example: *“Break down this goal into actionable tasks with suggested deadlines and dependencies.”*

Deliverables:

- GitHub repo + README
- Demo video

Evaluation Focus:

- Task completeness, timeline logic, LLM reasoning, code & API design
